Medical use for duct tape?

CHICAGO (AP) — Duct tape can apparently be used to remove warts. Researchers say over-the-counter duct tape is a more effective, less painful alternative to liquid nitrogen, which is used to freeze warts.

The study was reported in the October issue of the Archives of Pediatrics and Adolescent Medicine. The study was conducted at the Madigan Army Medical Center near Tacoma, Wash. It began with 61 patients between the ages of 3 and 22, but only 51 patients completed the study.

In the study, patients wore duct tape over their warts for six days. Then they removed the tape, soaked the area in water and used an emery board or pumice stone to scrape the spot. The tape was reapplied the next morning. The treatment continued for a maximum of two months or until the wart went away. Of the 25 patients treated with duct tape, 85 percent got rid of their warts. Compared with 60 percent of the 25 patients who received the freezing treatment.
